

Carriage Rollers

Carriage Rollers - Carriage rollers are specifically designed bearings which are used on lift masts in order to help them work within difficult environmental surroundings. Lift masts are normally subjected to oscillations, shocks, high dynamic and vibrations and static loads. This apparatus is frequently exposed to environmental influences like dust, cold, heat, aggressive ambient air, moisture and contamination. Therefore, the lift masts' guidance arrangements need to be specifically tough and have a specific high load carrying capacity.

Carriage rollers have been created as the solution for functioning in various environmental surroundings. These bearings are the solution where the guidance arrangements of the lift masts have to be economical and maintain operational security while having the ability to handle a particularly high load carrying capacity.
